Tangra, Inc. is pleased to announce the release of the new version of SQL Studio Data Compare - 2.5!

This new version includes the following updates:

- Target database backup option before executing scripts
- Row filtering using a custom WHERE clause
- Command line utility function for comparing database projects
- Command line utility database compare reports
- Custom templates for command line utility reports
- Date format option for output scripts
- Capability for generating INSERT only statements in output scripts (database dumping)
- Context menu on tabs upon right click
- Option to choose between using information schema views or system tables for SQL Server meta data retrieval
- Auto complete for Server/Database/Table Combo boxes when creating/editing a session
- Command line utility options to specify linked servers
- Fixed issue with occasional adding server twice to the list of servers

- Fixed issue preventing compare of a table that has first column with data type "uniqueidentifier"
- Fixed issue preventing compare of two tables that have columns with data type "sqlvariant"
- Fixed issue with checking number of rows
- Fixed named instances server listing issues

SQL Studio Data Compare is available at <http://www.SQLStudio.com>.
