Tangra, Inc., a Microsoft Gold Certified Partner, has released a free SQL Server query utility. SQL Studio Query eXecutor (QX) is a simple query and SQL script execution utility for SQL Server. It is a lightweight tool for working with SQL Server databases. There has been always a need for it when working with MSDE and SQL Server Express Edition or remote databases. It is not a replacement for the powerful Query Analyzer or the tools provided with Microsoft SQL Server, but rather an alternative for users that do not have those tools or do not want to install them. This free utility is our contribution to the SQL Server user community.

SQL Studio Query eXecutor functions at a glance

- Write and execute queries and stored procedures
- Save SQL scripts for future use
- Open saved scripts and execute
- Multiple result tables
- XML output
- Color coding for SQL language syntax

SQL Studio Query eXecutor supports Microsoft SQL Server 2005 (all editions), Microsoft SQL Server 2005 Express, Microsoft SQL Server 2000 (all editions), Microsoft MSDE 2000, and Remote Microsoft SQL Server instances.

SQL Studio Query eXecutor is available at <http://www.SQLStudio.com>.
